Organic (Participatory Guarantee System) PGS System Initiative in Myanmar

Dr. Than Than Sein

Myanmar Organic Grower and Producer Association MOGPA

Outline of presentation

PGS Introduction to Myanmar with ADB+ IFOAM

History and Concept of PGS

MOGPA Activities + PGS

PGS and Third Party are regarded by IFOAM as Complimentary Approaches to Organic Guarantees/Certification

Third Party

Follows regulatory requirements eg: those of EU etc. and standards of external certifiers and external inspection.

<u>Required for export to</u> <u>regulated markets</u> Participatory Guarantee System (PGS)

IFOAM PGS Guidelines and recognized 'local' standards, internal compliance

<u>Local and regional</u> <u>markets</u>

Third Party Inspection and Participatory Peer Review

Development of PGS into a recognized Guarantee System

- 'Alternative' (to 3rd Party) organic certifications have been around for many years.
- In 2004 in Brazil IFOAM and MAELA, at a workshop now referred to as Torres 1 representatives from many of these alternative 'schemes' came together to share their experiences in how they help smallholders gain recognition in their markets as organic producers.
- A key out put from Torres 1 was the synthesis and documentation of the common themes that underpinned many of the different approaches. This helped to define PGS as described in the *IFOAM PGS Guidelines Doc* and create the term **Participatory Guarantee** *Systems*.

Torres 1 Brazil- Participants

The Commercial Potential for Coordinated Group Activities Coordinated by a PGS

- Opportunities to build increased technical capacity and commercialize specific products;
- Centralized post-harvest handling leading to improved quality – market orientated grading and packing;
- Checking and recording systems transparency;
- Increased volumes of <u>quality</u> product to sell;
- Easier for buyers to interact with a 'one' seller;
- More and secure income = more opportunity for investment in infrastructure eg: packing house.

Objectives of PGS in GMS

- Development a certification process that will enable small holders to better integrate into modern value chains, and broaden their market reach, with regional trade options;
- Support local stakeholders to establish a structure for the national coordination of PGS;
- Provide policy makers with recommendations on how to integrate PGS into national agricultural and trade and development plans.

The four basic principles of organic agriculture Endorsed by IFOAM, September 2005

PRINCIPLES of ORGANIC AGRICULTURE

Principle of **HEALTH**

Organic Agriculture should sustain and enhance the health of soil, plant, animal, human and planet as one and indivisible.

Principle of ECOLOGY

Organic Agriculture should be based on living ecological systems and cycles, work with them, emulate them and help sustain them.

Principle of FAIRNESS

Organic Agriculture should build on relationships that ensure fairness with regard to the common environment and life opportunities.

Principle of CARE

Organic Agriculture should be managed in a precautionary and responsible manner to protect the health and well-being of current and future generations and the environment.

Healthy soil Healthy crops Healthy livestock Healthy people

Agro-ecology Diversity Recycling Ecological and social justice Fari Trade?

Precaution

CONTEXT OF PGS ADOPTION WORLDWIDE

- Driven by `certification'
- Early stage adoption of organic markets and regulations
- Small & marginalized farmers; harvesters
- Health a growing concern

Starting the PGS Process

Sharing and shaping the Vision

Configuring the Systems and Structures

Documentating Procedures

Peer Review + Testing and Implementing

Decision Making

Certificates (the guarantee document)

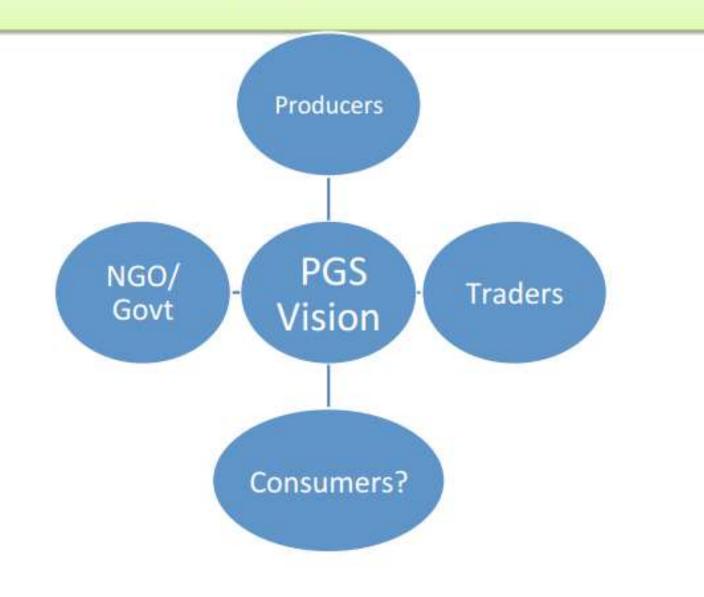

PGS Common Themes

- 1. Shared vision
- 2. Participatory
- 3. Transperancy

- 4. Trust
- 5. Learning process
- 6. Horizontality

Shaping the Vision

The PGS idea if TRUST is that:

- Farmers will work together to follow the PGS standards and rules.
- Farmers are commited to protecting nature through organic production.

Transparency

- clearly defined and documented systems, and
- public access to documentation and information about the PGS such as lists of certified producers and details about their farms and non-compliance actions.
- information sharing at meetings and workshops,
- Stakeholder participation in internal inspections (peer reviews), and
- involvement in decision making.

Horizontality

PGS are intended to be non-hierarchical.

- Sharing and rotating responsibility;
- Engaging producers directly in the peer review of each other's farms; and by
- Transparency in decision making processes.

PGS – Diversity in the Approach

At the heart of the PGS concept is the idea that while there are **Common Components** that underpin the operation of a PGS there is **no single model** for how they are structured and operate.

GUIDELINES ONLY

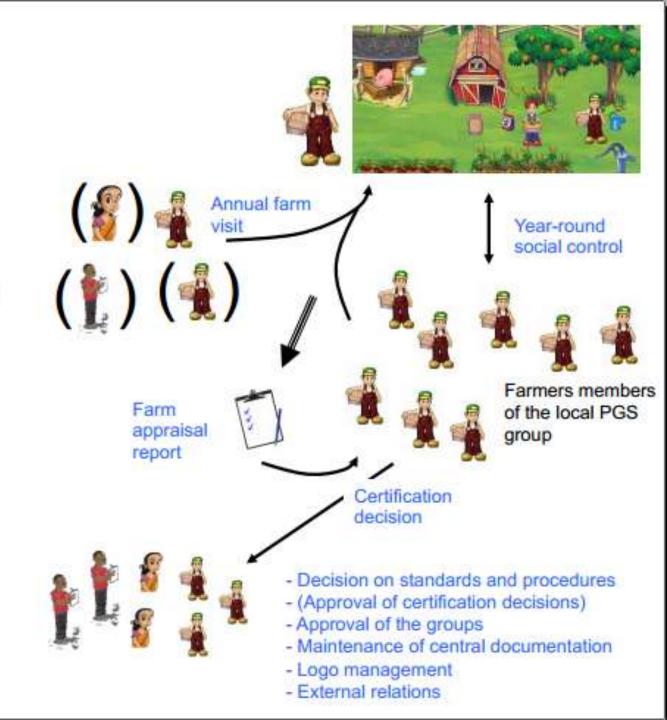

Other local stakeholders (NGO staff, extension worker, consultant, etc.)

Regional / national stakeholder council

IFOAM, 2010

Form (components) **common** to all PGS

- 1. Production standards
- 2. Rules for compliance
- 3. Documented management systems and procedures
- 4. <u>Mechanisms to verify farmer's comply with the</u> <u>rules</u>
- 5. Farmer's pledge/contract
- 6. Seals or labels
- 7. Defined consequences for non-compliance

(See IFOAM Self Evaluation Questionnaire)

Basic Production Standard – example

- 1. Chemical fertilizers are prohibited
- 2. Chemical pesticides and herbicides are prohibited
- 3. The use of botanical pesticides is allowed
- 4. Farming equipment used for conventional farming must be cleaned before use on an organic farm
- 5. Seeds must not be treated with chemicals before sowing.
- 6. Bags and containers used to harvest and transport organic product must be clean and clearly labeled 'organic only'
- A suitable buffer areas must be in place between organic and nonorganic farms.
- 8. Manure sourced from animals from off the farm must be composted.
- 9. GMO seeds are prohibited
- 10. The conversion period to full organic is 12 months for vegetables and 18 months for perennial crops
- 11. Livestock living on organic land should be fed organic feed.

Pledge Example

We promise that:

- We have a copy of the Basic Organic Standards and we understand the standard.
- We agree to follow these standards.
- We will participate in Peer Reviews
- We will report any actions by ourselves or the actions of others in our group that violate the standards.
- We understand that if we do not follow the standards we will be penalised.

Date agreed and signed:

- Signature of Group leader (on-behalf of group):
- Signature of farmer

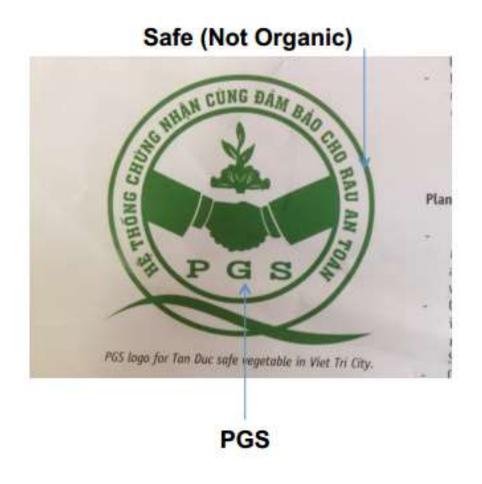

Evolving Nature of PGS

 PGS are taking on a new dynamic, becoming much MORE than just a mechanism for providing an **organic** guarantee, they are being adopted as a methodology for facilitating PRO-POOR development.

• PGS (in some countries) are recognised in some Government Regulations (Brazil, India)

PGS - Organic and not Organic PGS

Individual vs collective processing

Improved technique = improved quality

Group supply- Collective processing

Direct Marketing - individual vs collective marketing

Brief History of MOGPA

- Myanmar Fruit, Vegetable and Flower Producer and Exporter Association organized the Myanmar Organic Agriculture Group on 28th September 2006.
- In 2013, November, MOAG was changed the name to Myanmar Organic Grower and producer Association at National level cluster for MFVP.

Myanmar Organic Grower and Producer Association

• Our Vision

A sustainable and secure food system and agro-ecosystem that promotes the human's health and environment of Myanmar.

• Our Mission

Our mission is to conduct the environmental and health effects of organic food and farming and communicate the findings to the public.

We will achieve our mission through:

- Education on sustainable organic food and farming to improve the health of humans and the environment.
- Communicate credible, evidence-based science that supports the health and environmental benefits of sustainable organic food and farming
- Advance understanding about the health and environmental benefits of organic food and farming through scientific research and literature
- Improve the efficacy and sustainability of organic farming methods through the trainings

CAPACITY BUILDING FOR MEMBERS

 Center Based Training Community Based Training Monthly Organic Farming Training •GAP Training •TOT Training Training with NGO and INGO •Environmental and Chemical Safety Training in Myanmar Engineering Society (MES)

Knowledge sharing at CATDC, DOA

MOGPA's Organic PGS Certification

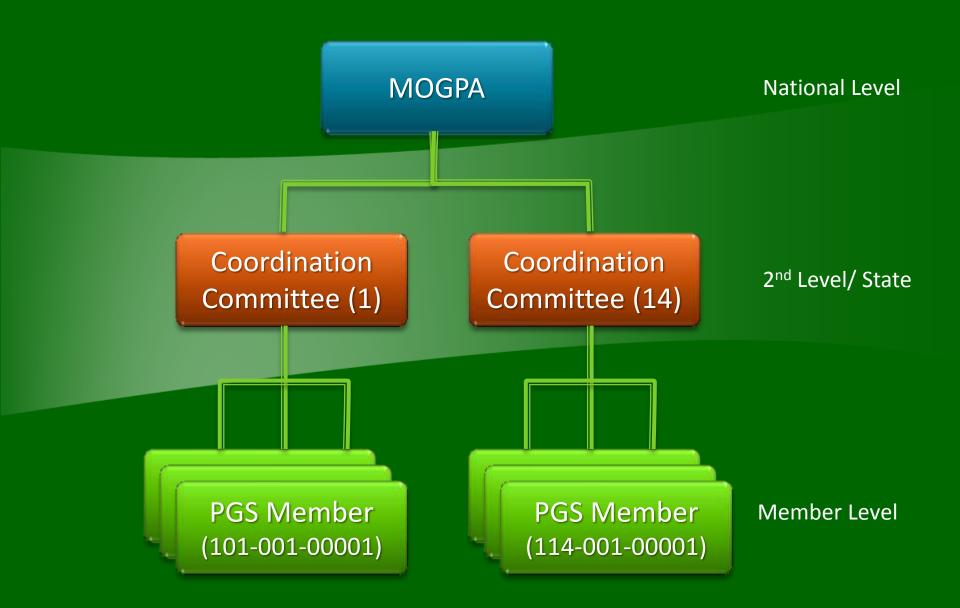

Operation Procedure

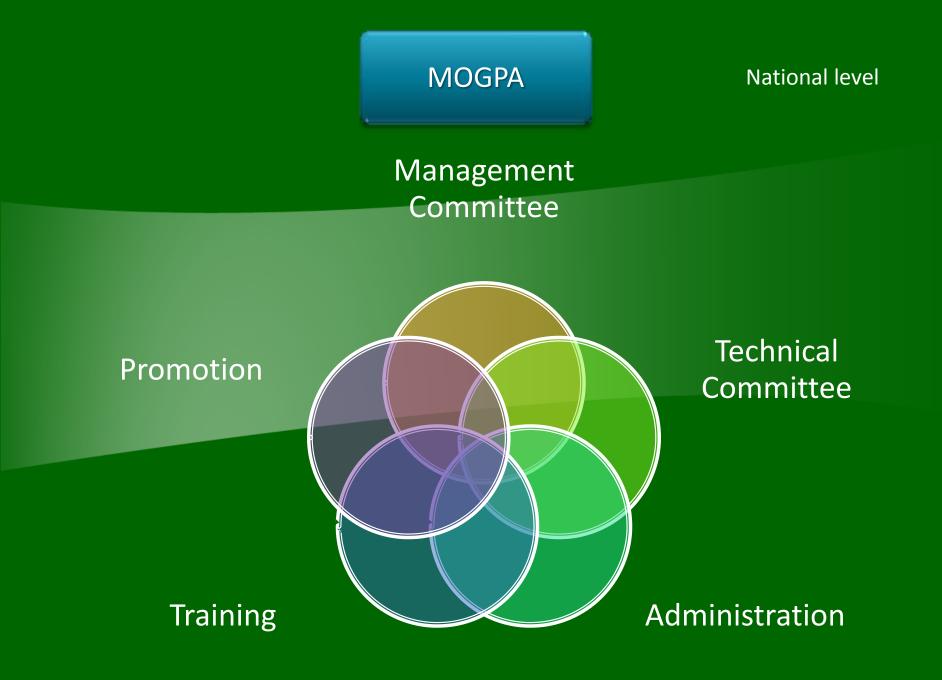

Main Objectives of PGS Certification System

- Main Objectives are ...
- 1.To provide a credible organic guarantee to consumers seeking organic produce at a reasonable cost for the farmer
- 2.To motivate active participation on the part of the stakeholders results in greater empowerment but also greater responsibility.
- 3. To have Many other positive effects like improved knowledge sharing.

Approach & methodology and major activities

- I. Public talk for organic awareness to project area.
- 2. Fix organic national standard to their farm
- 3. Introduce PGS system with regional training
- 4. Organize PGS farmers group
- 5. PGS community trainings
- 6. Inspection with peer review
- PGS certification

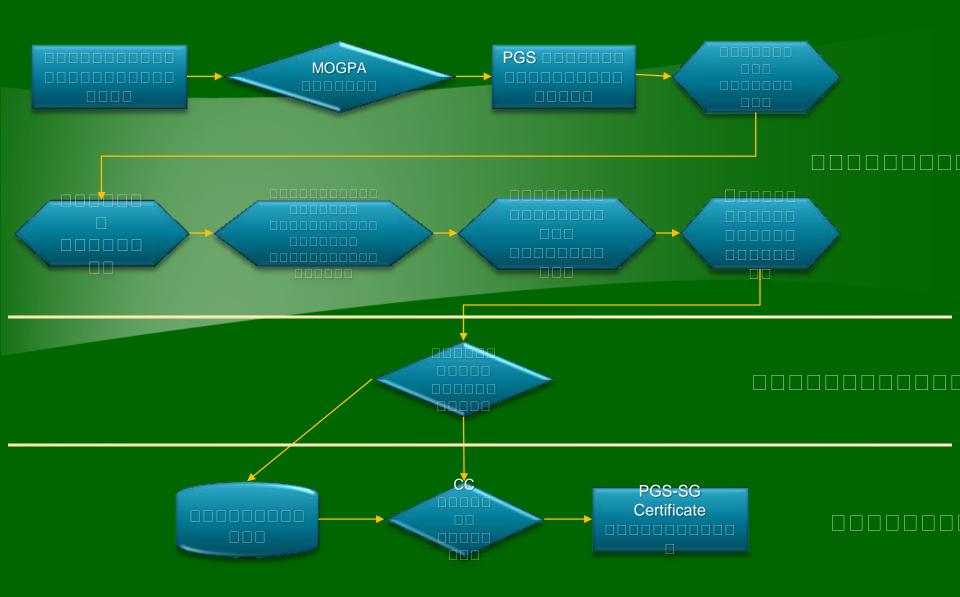

Organic Farmer's Pledge

India is my country. All Indians are my brothers and sisters. I love my land and all men and women have equal rights on the land. I am proud of the diverse culture and diverse traditional seeds of my country and I pledge to preserve them. I will conserve all animals, birds, plants, trees, micro-organisms and indigenous seeds of my farm and surrounding areas. I will also conserve water and all life in it. I undertake to keep alive my land by using traditional seeds and organic inputs. I will not use harmful chemical fertilizers, pesticides, insecticides and GMO seeds. I will propagate my seeds through nature and traditional methods. I promise to ensure organic integrity and to live in harmony with all citizens. In their welfare and development lies my happiness.
